

CIS 412

DATABASE MANAGEMENT SYSTEMS

Chapter 6

Database Design 2: Design Method

DATABASE DESIGN LANGUAGE (DBDL)

- Table name followed by columns in parentheses
 - Primary key column(s) underlined
- AK identifies alternate keys
- SK identifies secondary keys
- FK identifies foreign keys
 - Foreign keys followed by an arrow pointing to the table identified by the foreign key

DATABASE DESIGN LANGUAGE (DBDL) (CONTINUED)

```
Employee (EmployeeNum, LastName, FirstName, Street, City, State, Zip,  
         WageRate, SocSecNum, DepartmentNum)  
    AK   SocSecNum  
    SK   LastName  
    FK   DepartmentNum → Department
```

FIGURE 6-1: DBDL for the Employee table

ENTITY-RELATIONSHIP (E-R) DIAGRAMS

- Visually represents database structure
- Rectangle represents each entity
 - Entity's name appears above the rectangle
- Primary key for each entity appears above the line in the entity's rectangle
- Other columns of entity appear below the line in rectangle

ENTITY-RELATIONSHIP (E-R) DIAGRAMS (CONTINUED)

- Letters AK, SK, and FK appear in parentheses following the alternate key, secondary key, and foreign key, respectively
- For each foreign key, a line leads from the rectangle for the table being identified to the rectangle for the table containing the foreign key
- Text uses **IDEF1X** style of E-R diagram

ENTITY-RELATIONSHIP (E-R) DIAGRAMS (CONTINUED)

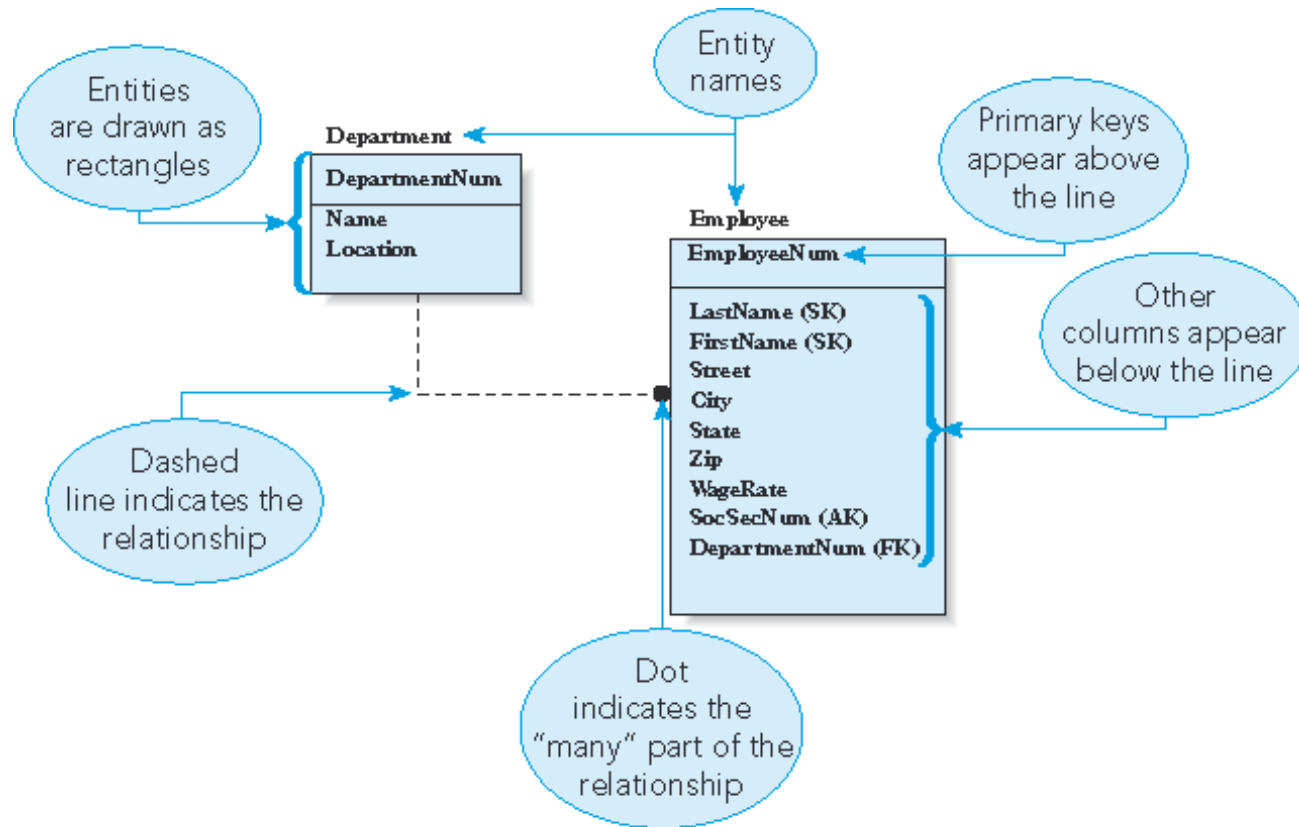

FIGURE 6-2: E-R diagram

DATABASE DESIGN EXAMPLES (CONTINUED)

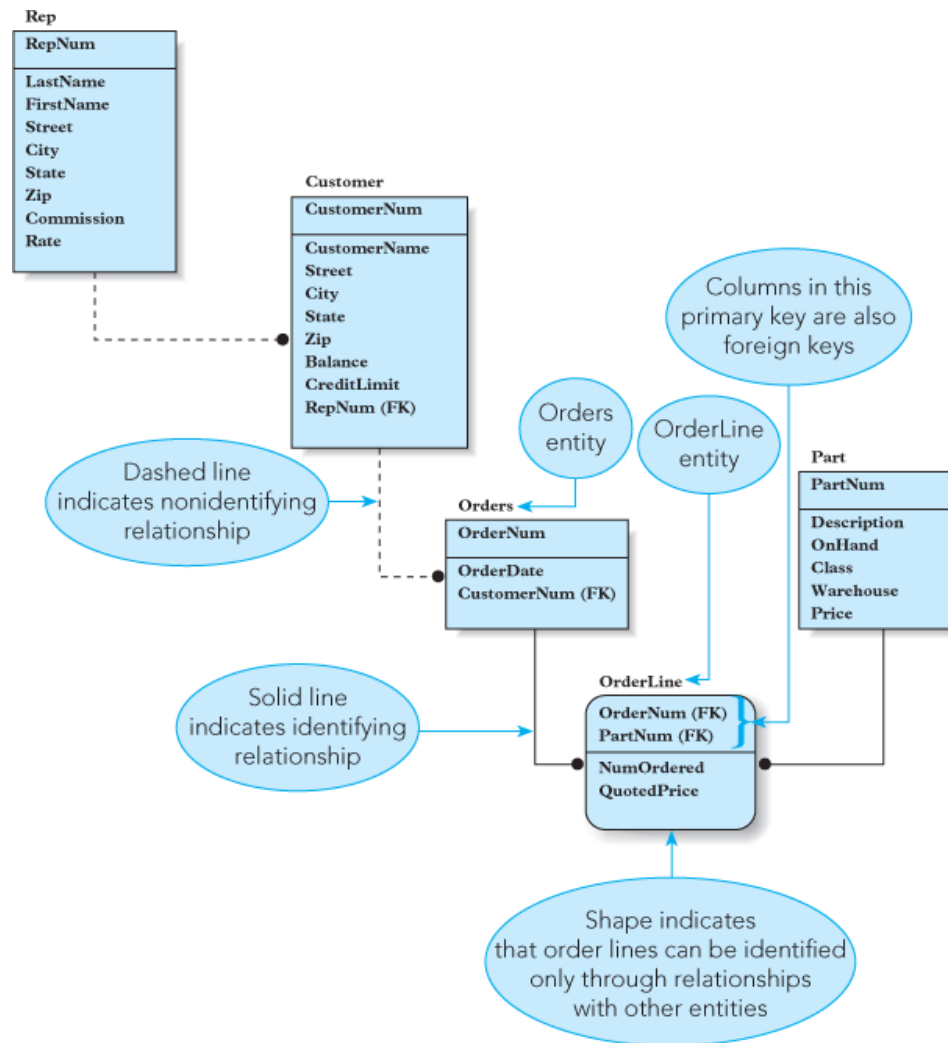

FIGURE 6-8: Final information-level design

PHYSICAL-LEVEL DESIGN

- Undertaken after information-level design completion
- Most DBMSs support primary, candidate, secondary, and foreign keys
- To enforce restrictions, DB programmers must include logic in their programs

SURVEY FORM

- Used to collect information from users
- Must contain particular elements
 - Entity information
 - Attribute (column) information
 - Relationships
 - Functional dependencies
 - Processing information

OBTAINING INFORMATION FROM EXISTING DOCUMENTS

- Existing documents can furnish information about database design
- Identify and list all columns and give them appropriate names
- Identify functional dependencies
- Determine the tables and assign columns

ONE-TO-ONE RELATIONSHIP CONSIDERATIONS

- Simply include the primary key of each table as a foreign key in the other table
 - No guarantee that the information will match
- One solution: create a single table
 - Workable, but not the best solution
- Better solution
 - Create separate tables for customers and sales reps
 - Include the primary key of one of them as a foreign key in the other

ONE-TO-ONE RELATIONSHIP CONSIDERATIONS (CONTINUED)

Solution 1:
Rep

RepNum	LastName	FirstName	CustomerNum
20	Kaiser	Valerie	148
35	Hull	Richard	282
65	Perez	Juan	356

Customer

CustomerNum	CustomerName
148	Al's Appliance and Sport
282	Brookings Direct
356	Ferguson's

Solution 2:
Rep

RepNum	LastName	FirstName
20	Kaiser	Valerie
35	Hull	Richard
65	Perez	Juan

Customer

CustomerNum	CustomerName	RepNum
148	Al's Appliance and Sport	20
282	Brookings Direct	35
356	Ferguson's	65

FIGURE 6-23: One-to-one relationship implemented by including the primary key of one table as the foreign key (and alternate key) in the other table

MANY-TO-MANY RELATIONSHIP CONSIDERATIONS

- Complex issues arise when more than two entities are related in a many-to-many relationship
- **Many-to-many-to-many relationship:** involves multiple entities
- Deciding between a single many-to-many-to-many relationship and two (or three) many-to-many relationships
 - Crucial issue: independence

MANY-TO-MANY RELATIONSHIP CONSIDERATIONS (CONTINUED)

RepCustomer		PartRep	
RepNum	CustomerNum	PartNum	RepNum
20	148	AT94	20
20	282	AT94	65
35	148	DR93	20
65	282	DR93	35
65	356	DR93	65
CustomerPart		DW11	35
CustomerNum	PartNum		
148	AT94		
148	DR93		
148	DW11		
282	AT94		
282	DR93		
356	AT94		

FIGURE 6-25: Result obtained by splitting the Sales table into three tables

MANY-TO-MANY RELATIONSHIP CONSIDERATIONS (CONTINUED)

Sales

RepNum	CustomerNum	PartNum
20	148	AT94
20	148	DR93 !!!!
20	282	AT94 !!!!
20	282	DR93
35	148	DR93
35	148	DW11
65	282	AT94
65	282	DR93
65	356	AT94

FIGURE 6-26: Result obtained by joining three tables—the second and third rows are in error!

NULLS AND ENTITY SUBTYPES

- Null
 - Special value
 - Represents *absence* of a value in a field
 - Used when a value is unknown or inapplicable
- Splitting tables to avoid use of null values
- **Entity subtype**: table that is a subtype of another table

NULLS AND ENTITY SUBTYPES (CONTINUED)

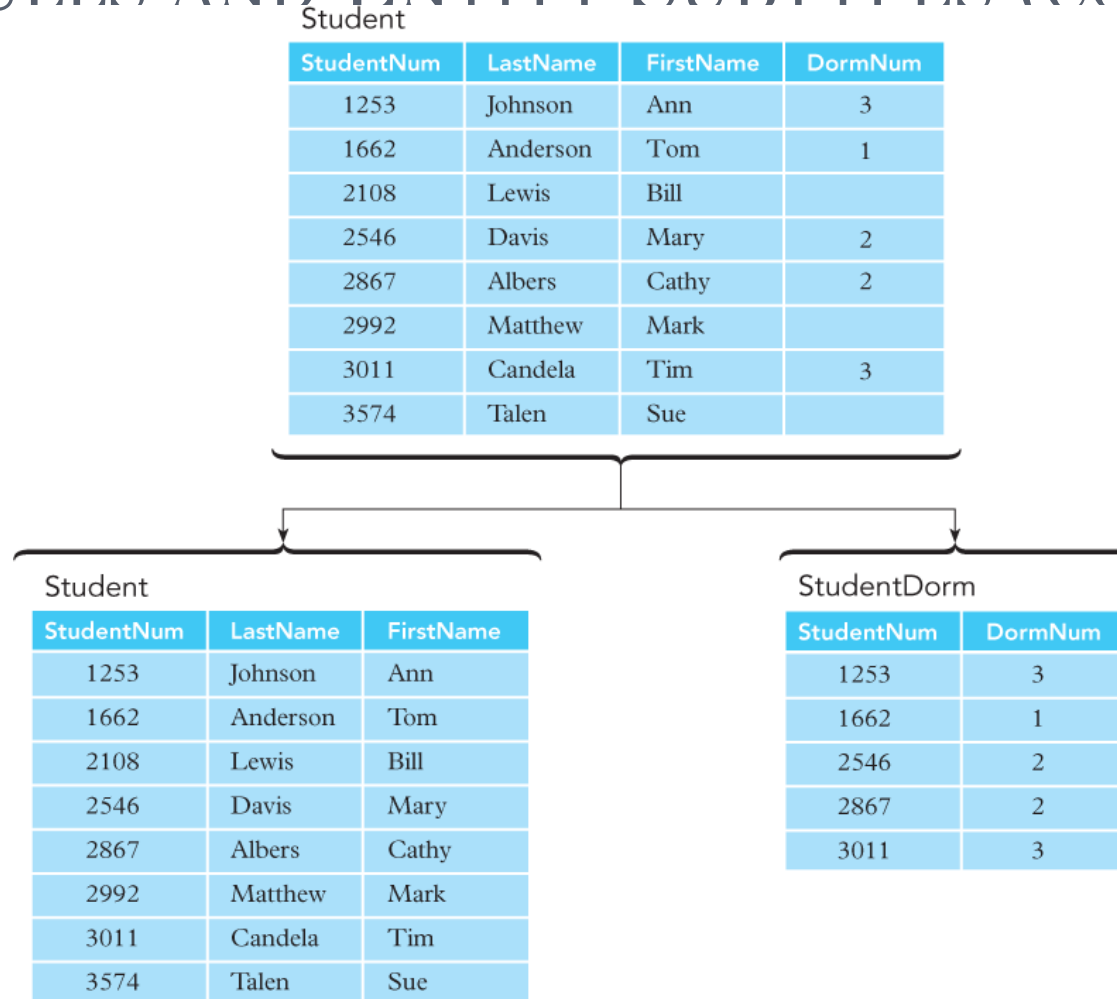

FIGURE 6-27: Student table split to avoid use of null values

NULLS AND ENTITY SUBTYPES (CONTINUED)

- Subtype called a **category** in IDEF1X terminology
- **Incomplete category**: records that do not fall into the subtype
- **Complete categories**: all records fall into the categories

AVOIDING PROBLEMS WITH THIRD NORMAL FORM WHEN MERGING TABLES

- When combining third normal form tables, the result might not be in third normal form
- Be cautious when representing user views
- Always attempt to determine whether determinants exist and include them in tables

JOINING TABLES

- An **inner join** is a join in which the DBMS selects records from two tables only when the records have the same value in the common field that links the tables

The diagram illustrates an inner join between two tables: **tblCustomer** and **tblContract**. The common field is **Customer ID**.

tblCustomer

Customer ID	Company	First Name	Last Name	Phone	Address	City	State
11004		Student	Name	616-866-9111	2807 Fairview Dr	Rockford	MI
11038	M. Grant Investment Company	Alex	Engber	517-482-1400	505 Washington Ave	Lansing	MI
11065	Town of Holland	Amber	Ward	616-393-0403	24 Prospect St	Holland	MI
11087	Walker Investment Company	Nancy	Belanger	269-983-0190	1752 S Main St	Battle Creek	MI

tblContract

Contract Num	Customer ID	Contract Amt	Signing Date	Start Date	Contract Type
3026	11038	\$165,000	03/11/2013	08/18/2013	Landscape plans for large-scale housing development
3076	11065	\$5,000	04/08/2014	05/09/2014	Peer plan review for town
3098	11065	\$35,000	07/15/2014	09/09/2014	Design of a small town park
3103	11087	\$252,000	08/17/2014	12/06/2014	Landscape plans for large-scale housing development
3110		\$38,000	08/25/2014	11/16/2014	Renovation of playground at elementary school

qryCustomerContract

Company	First Name	Last Name	City	Contract Amt	Signing Date
M. Grant Investment Company	Alex	Engber	Lansing	\$165,000	03/11/2013
Town of Holland	Amber	Ward	Holland	\$5,000	04/08/2014
Town of Holland	Amber	Ward	Holland	\$35,000	07/15/2014
Walker Investment Company	Nancy	Belanger	Battle Creek	\$252,000	08/17/2014

Annotations:

- common field**: Points to the **Customer ID** column in both tables.
- nonmatching rows**: Points to the row in **tblContract** with **Contract Num** 3110, which has no matching **Customer ID** in **tblCustomer**.
- records that have the same value in the common field linking the tables**: Points to the rows in **qryCustomerContract** that correspond to the matching records from the inner join.

JOINING TABLES

- An **outer join** is a join in which the DBMS selects all records from one table and only those records from a second table that have matching common field values

tblCustomer

Customer ID	Company	First Name	Last Name	Phone	Address	City	State
11004		Student	Name	616-866-9111	2807 Fairview Dr	Rockford	MI
11038	M. Grant Investment Company	Alex	Engber	517-482-1400	505 Washington Ave	Lansing	MI
11065	Town of Holland	Amber	Ward	616-393-0403	24 Prospect St	Holland	MI
11087	Walker Investment Company	Nancy	Belanger	269-983-0190	1752 S Main St	Battle Creek	MI

tblContract

Contract Num	Customer ID	Contract Amt	Signing Date	Start Date	Contract Type
3026	11038	\$165,000	03/11/2013	08/18/2013	Landscape plans for large-scale housing development
3076	11065	\$5,000	04/08/2014	05/09/2014	Peer plan review for town
3098	11065	\$35,000	07/15/2014	09/09/2014	Design of a small town park
3103	11087	\$252,000	08/17/2014	12/06/2014	Landscape plans for large-scale housing development
3110		\$38,000	08/25/2014	11/16/2014	Renovation of playground at elementary school

qryCustomerOuterJoin

Company	First Name	Last Name	City	Contract Amt	Signing Date
	Student	Name	Rockford		
M. Grant Investment Company	Alex	Engber	Lansing	\$165,000	03/11/2013
Town of Holland	Amber	Ward	Holland	\$5,000	04/08/2014
Town of Holland	Amber	Ward	Holland	\$35,000	07/15/2014
Walker Investment Company	Nancy	Belanger	Battle Creek	\$252,000	08/17/2014

all records from the tblCustomer table and only those records from the tblContract table that have matching values in the common field

tblCustomer record included with no matching tblContract record

nonmatching rows

common field

HOW TO CREATE OUTER JOIN QUERIES

- Watch this handy video for instruction on how to create an Outer Join in Access.

<http://www.youtube.com/watch?v=87b2w-ili7c>

- After viewing the video, create an outer join in Premier Products database between the Customer table and the Order table. Create Customers with no Orders if necessary in order to test this.
- Look at the SQL view of your query to study the SQL commands necessary for this type of query.

THE ENTITY-RELATIONSHIP MODEL

- An approach to representing data in a database
- Entities are drawn as rectangles
- Relationships are drawn as diamonds with lines connecting the entities involved in relationships
- **Composite entity**: exists to implement a many-to-many relationship
- **Existence dependency**: existence of one entity depends on the existence of another related entity
- **Weak entity**: depends on another entity for its own existence

THE ENTITY-RELATIONSHIP MODEL (CONTINUED)

FIGURE 6-34: One-to-many relationship

CIS 372

DATABASE MANAGEMENT SYSTEMS

ADDITIONAL MATERIAL
Creating Custom Reports

DESIGNING A CUSTOM REPORT

- Before you create a custom report, you should first plan the report's contents and appearance
 - Purpose and record source
 - Sort order
 - Grouping fields
 - Balance attractiveness and readability
 - Group related fields
 - Identify field values
 - Include title, page number, and date on every page
 - Identify end of report
 - Use little formatting
 - Use consistent style

OVERVIEW OF REPORT CREATION

- Watch this video for a quick overview of the process:
<http://www.youtube.com/watch?v=8qZ4Z7-e6pI>
- The creator of this video also has the sample database for download, as well as a written example here:
<http://www.gcflearnfree.org/access2010/10> AND
<http://www.gcflearnfree.org/access2010/11>
- Try these to learn the basics of report design.

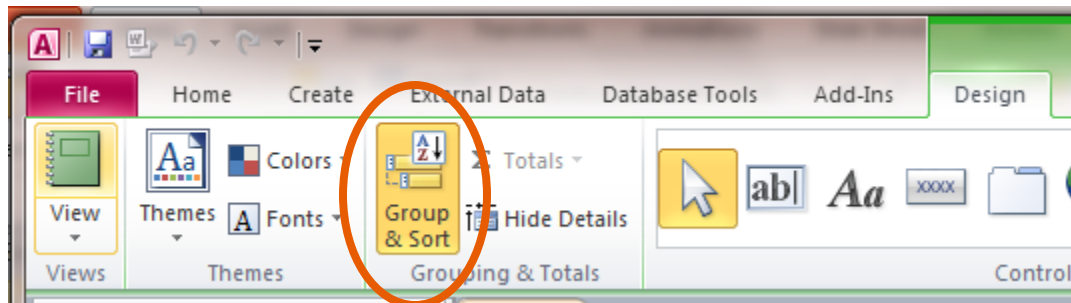

WORKING WITH CONTROLS IN DESIGN VIEW

- Compared to Layout view, Design view gives you greater control over the placement and sizing of controls, and lets you add and manipulate many more controls, but at the expense of not being able to see live data in the controls to guide you as you make changes

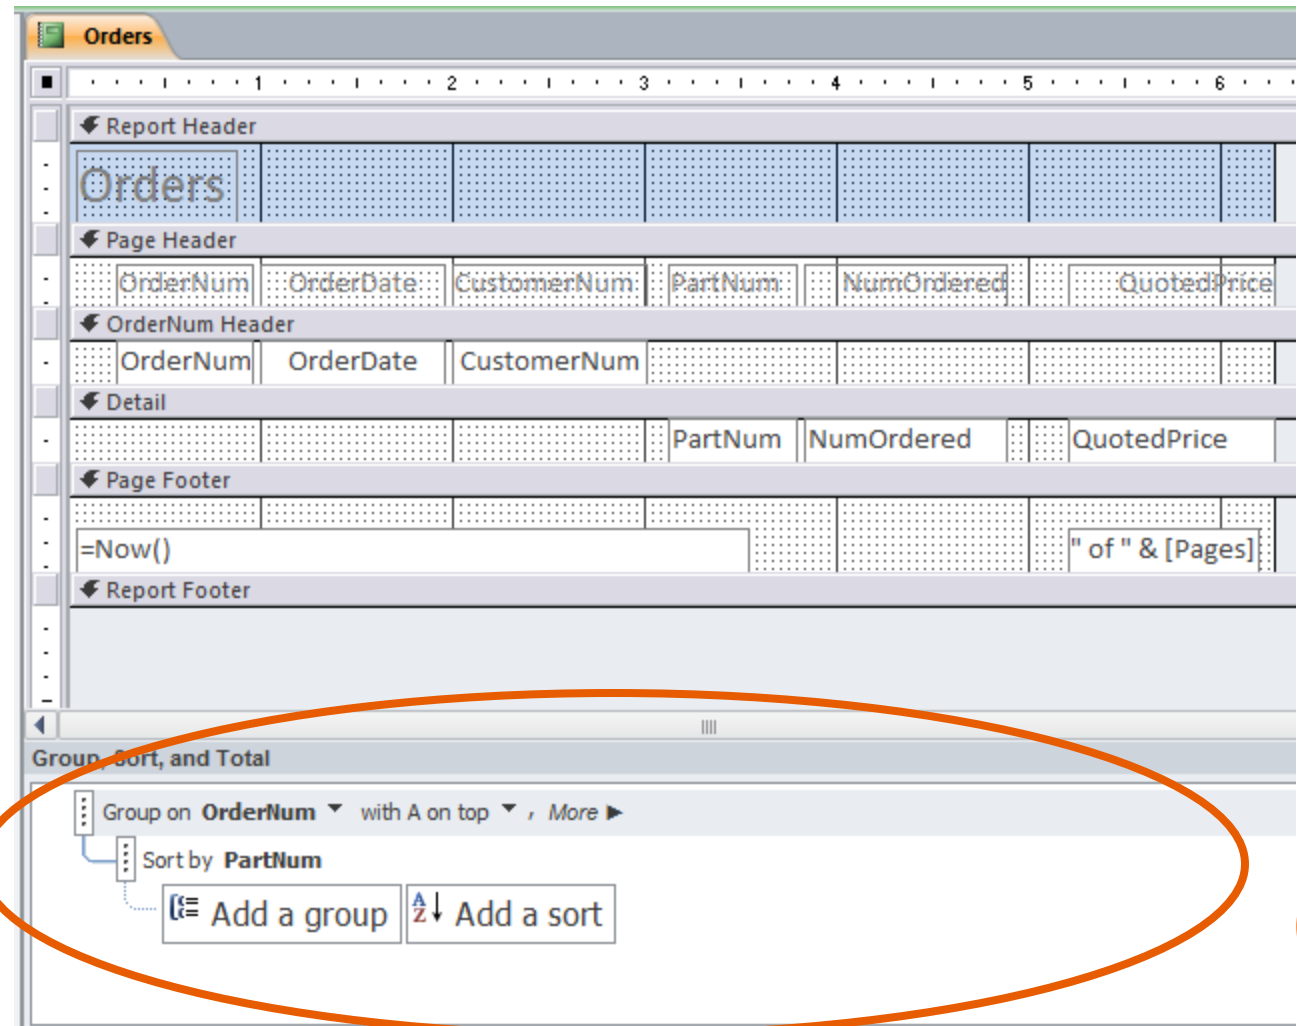

SORTING AND GROUPING DATA IN A REPORT

- Information is often easier to understand when it is divided into groups. For example, a report that groups Sales by SalesRep easily provides sales totals, as well as other statistical information.
- EXPLORE:** Open the Orders report in PremiereProducts.accdb in Design View.
- On the Design tab – click Group and Sort

SORTING AND GROUPING DATA IN A REPORT

- Review the Group on OrderNum and Sort by PartNum

USING CONDITIONAL FORMATTING IN A REPORT (1/2)

- **Conditional formatting** in a report (or form) is special formatting applied to certain field values depending on one or more conditions
- Click the appropriate field value
- In the Control Formatting group on the Format tab, click the **Conditional Formatting** button
- Click the **New Rule** button and set a format for a new rule.
- For example – you could set a format that will make a red, bold font if the number of parts falls below 10 for a given item:

USING CONDITIONAL FORMATTING IN A REPORT (2/2)

- **Try IT:** Set a conditional format that will make a red, bold font if the number of parts falls below 10 for a given item in the Premiere Products database/
Part table:

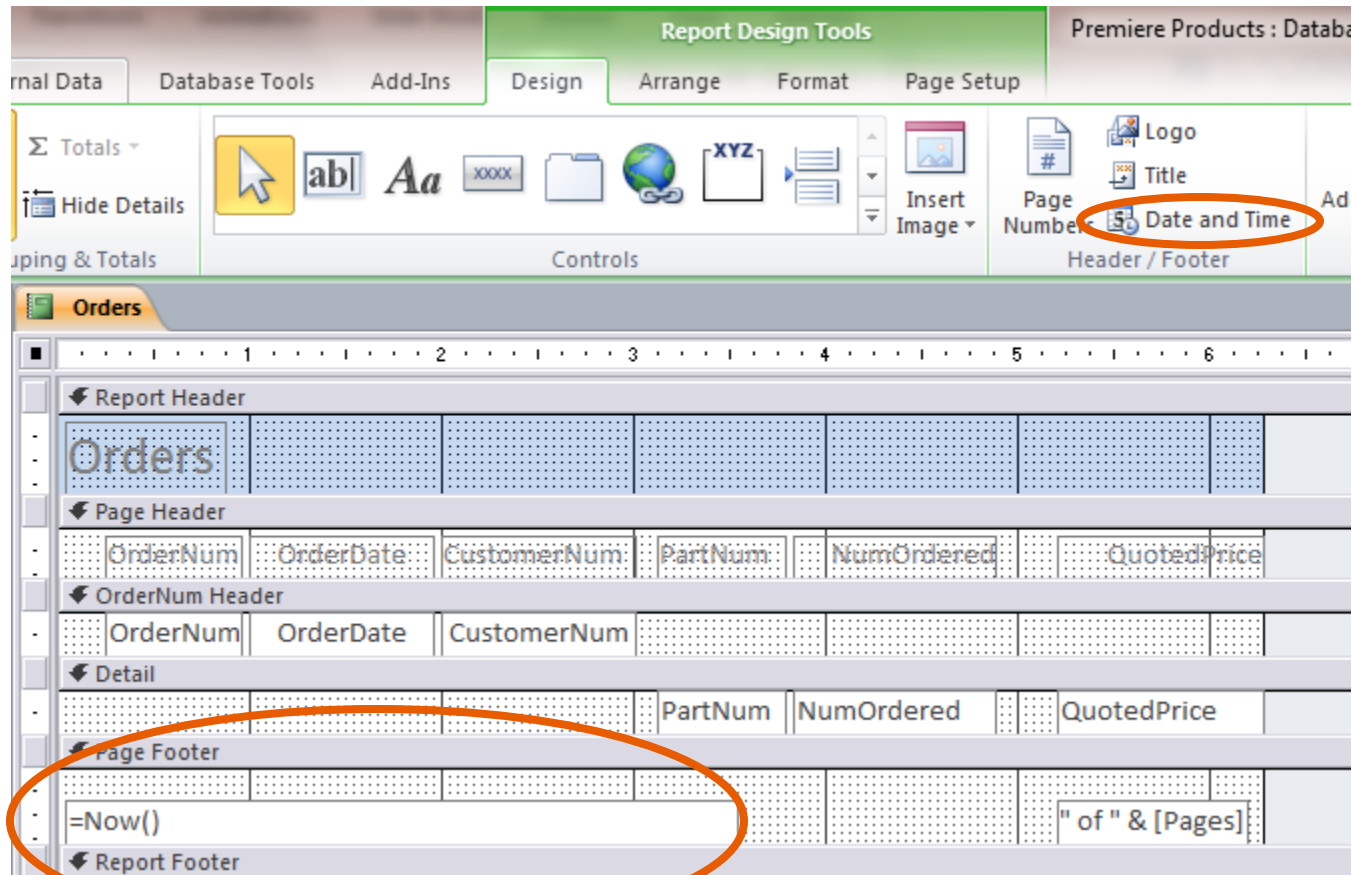

Part					
PartNum	Description	OnHand	Class	Warehouse	Price
AT94	Iron	50	HW	3	\$24.95
BV06	Home Gym	45	SG	2	\$794.95
CD52	Microwave Oven	32	AP	1	\$165.00
DL71	Cordless Drill	21	HW	3	\$129.95
DR93	Gas Range	8	AP	2	\$495.00
DW11	Washer	12	AP	3	\$399.99
FD21	Stand Mixer	22	HW	3	\$159.95
KL62	Dryer	12	AP	1	\$349.95
KT03	Dishwasher	8	AP	3	\$595.00
KV29	Treadmill	9	SG	2	\$1,390.00

ADDING THE DATE AND TIME TO A REPORT

- Display the report in Layout or Design view
- In the Header/Footer group on the Design tab in Design view or in Layout view, click the Date and Time button to open the Date and Time dialog box
- To display the date, click the Include Date check box, and then click one of the three date option buttons
- To display the time, click the Include Time check box, and then click one of the three time option buttons
- Click the OK button

ADDING THE DATE AND TIME TO A REPORT

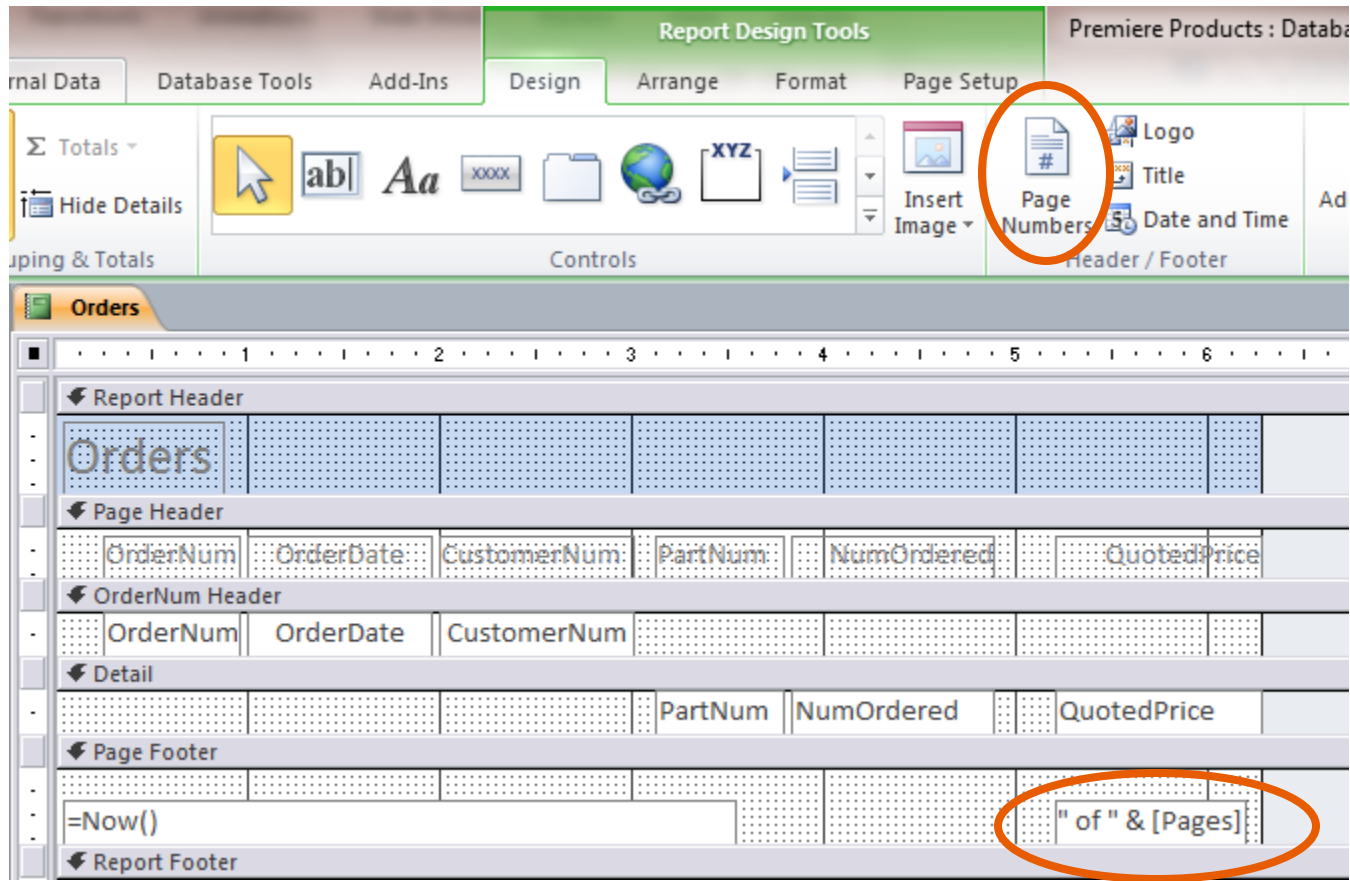

ADDING PAGE NUMBERS TO A REPORT

- Display the report in Layout or Design view
- In the Header/Footer group on the Design tab in Design view or in Layout view, click the Page Numbers button to open the Page Numbers dialog box
- Select the format, position, and alignment options you want
- Select whether you want to display the page number on the first page
- Click the OK button to place the page number expression in the report

ADDING PAGE NUMBERS TO A REPORT
